Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hsien (2005/0047124A1) and further in view of Henry (6,206,543).

Hsien discloses the claimed invention except for the fixing member being attached to the peak of a cap. Hsien discloses a fixing member (34,49), a moving manipulate member having a body (1020,24), an extension portion (22) and a connecting portion (310) the moving manipulate member being connected to and moved along the fixing member (slides along fixing member 34) and a pressing member (21, is pressed into receptacle 310) being connected to the moving manipulate member and controlling the manipulate member (controls movement of entire manipulate member in a desired rotational direction) wherein a clip part having a shape of a circle is provided at a lower end of the extension portion(49) formed at the connecting portion of the movable manipulate member and wherein a lantern is attached to an detached from the clip (in its entirety, lantern 11 is detached and attached to the clip by means of 10,20,24), the lantern has a shape of a cylinder a battery loaded within the lantern and a

on/off switch is protruded from one side of the lantern (fig 21), the clip part comprises a single clip and is formed at the lower end of the extension portion of the moving manipulate member. Henry discloses a lantern with a clip attached to the peak of a cap. It would have been obvious to one of ordinary skill in the art at the time the invention was made to attach the lantern of Hsien to the peak of a cap as taught by Henry for the purpose of providing a light source attached to the head of a wearer to provide a hands free lighting source. With regards to the clip part comprising a pair of clips, It would have been obvious to one of ordinary skill in the art at the time the invention was made to use a pair of clips in the device of Hsien since it has been held that mere duplication of essential working parts of a device involves only routine skill in the art. *St. Regis Paper Co. v. Bemis Co.*, 193 USPQ 8.
